

Response to the COVID-19 vaccine effects and the “protein shedding”

A growing number of people are asking how will NANO SOMA help to remove the effects of the vaccine(s) when people have taken them and the effects from the so-called shedding of what is reportedly a spike protein to the unvaccinated by those who have been vaccinated. Firstly, the famous French virologist Luc Montagnier, the [2008 winner of the Nobel Prize in Physiology or Medicine](#) has warned that [many will die from the vaccines](#). Further, Yolande Norris-Clark, a Canadian specialist in women’s health and a doula [recently warned of the effects](#) of the shedding upon the hormonal states of unvaccinated women who come into contact with the vaccinated. Yolande’s video was quickly removed from YouTube and I understand that she has since fled with her family from Canada to Mexico because of the attacks upon her family, I’m speculating because of her uncompromising, informed and articulate stand and message. More and more people are becoming aware of these effects and are looking for a solution.

Can NANO SOMA help?

Firstly, please understand that neither I nor any of the companies supplying NANO SOMA or Metasomer nor the companies’ directors, shareholders nor employees are medical doctors and do not provide medical advice. For medical advice, please consult your medical practitioner. Further, these products are not intended to diagnose, treat, cure or prevent any disease.

We all look at the health condition we have as being unique and special, and one that needs specific treatment. More specifically, does something that triggers the body to heal everything that is not representing good health, trigger the body to heal my specific condition?

It’s how we’ve been taught to think about our health.

The simple answer is, when the body is prompted by NANO SOMA to trigger processes and pathway that lead to improved health.

The components of the vaccines and any shedding to others do not belong in our bodies, we could expect that NANO SOMA will trigger our bodies to rid themselves of this contamination.

Is their evidence to support this?

In my opinion, this falls into two categories:

Clearing the so-called “spike proteins” that are shedding to others. If we recall our first introduction to these spike proteins, these were the proteins projecting from the SARS-COV-2 virus ostensibly responsible for COVID-19. So, when there is talk of shedding spike proteins, it is likely these are viral that carry these spike proteins.

In the in vitro studies, conducted at the behest of Dr. Palayakotai Raghavan (Raghu) to examine the effectiveness of NANO SOMA in blocking the SARS-COV-2 virus from entering the cells, [it was shown](#) that the required priming of the spike protein (“**SARS-COV-2 uses the receptor ACE2 for entry and the serine protease TMPRSS2 for S protein priming**”) to enable the virus to enter the cell was blocked by NANO SOMA: “**Metadichol (NANO SOMA) inhibits SARS-COV-2 entry into host cells by inhibiting TMPRSS2 and boosts the antiviral response by enhancing innate and adaptive immunity through the vitamin D pathway and antiviral activity by endogenously increasing vitamin C levels.**”

This result is entirely transferrable to the so-called spike protein shedding.

The second area is the effects of the mRNA components of the vaccines. Will these be cleared?

It has been shown that NANO SOMA triggers processes and biological pathways in our body that mimic the human DNA to within 99%, with further tests currently underway to extend this understanding. This gives the body a template against which to identify all errors in and contamination of our DNA, and clear it. Indeed, it is likely that use of it by child bearing women could potentially mitigate genetic birth defects

So, there is strong in vitro evidence to support the ability of NANO SOMA to clear direct and indirect effects of the COVID-19 vaccines.

Is there in vivo (in the body) confirmation?

Firstly, no-one who has been using NANO SOMA and been vaccinated has been known to suffer ill health as a result of being vaccinated.

There have been cases of people experiencing skin conditions (rashes, hives) as a result of being vaccinated or coming into contact with the vaccinated. In some cases, these have cleared on beginning to use NANO SOMA, others take a few days to clear.

There is also a trial being planned at a hospital in Mumbai, India, from which we hope to obtain formal in vivo confirmation of these results. We will update this guidance when those results are available.

Suggested usage protocol

If you have been vaccinated, as soon as possible after being vaccinated use 5 sprays in your mouth every 4 hours for 36 hours.

If you experience a skin reaction to the vaccine or as a result of being in contact with somebody who has been vaccinated, use 5 sprays every 4 hours until the condition is cleared.
